DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a reproducing apparatus. Independent claim 1 identifies the uniquely distinct features "controlling means for effecting control of the reproducing means and the reproduction processing means so that in response to the selecting operation by the selecting means when the plurality of representative images are displayed by the displaying means before the reproduction start instruction by the reproduction instructions means, the reproducing means reproduces a predetermined amount of the moving image data of the contents concerning the selected representative image to write the predetermined amount of the reproduced moving image data in the memory and the reproduction processing means does not effect reading out the written predetermined amount of the moving image data from the memory, the controlling means further controlling the reproduction processing means so that the reproduction processing means starts readout of the predetermined amount of the moving image data from the memory in response to the reproduction start instruction by the reproduction instruction means". The closest prior art, Nakai (5,949,955) and Aotake et al. (5,687,160) disclose conventional reproducing apparatus, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Independent claim 9 identifies the uniquely distinct features "controlling means for controlling the reproducing means so that when the menu screen is being displayed

by the displaying means before the reproduction start instruction by the reproduction instruction means, the reproducing means reproduces a predetermined amount of the moving image data of the contents concerning each of the plurality of representative images displayed on the menu screen to write the predetermined amount of each moving image data in the memory, the controlling means further controlling the reproduction processing means so that in response to the reproduction start instruction by the reproduction instruction means, the reproduction processing means reads out and outputs, from among the predetermined amount of the moving image data of the plurality of contents stored in the memory, the predetermined amount of the moving image data of the contents concerning the selected representative images". The closest prior art, Nakai (5,949,955) and Aotake et al. (5,687,160) disclose conventional reproducing apparatus, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Independent claim 22 identifies the uniquely distinct features "controlling means for controlling the reproducing means so that when the menu screen is being displayed by the displaying means before the reproduction start instruction by the reproduction instruction means, the reproducing means reproduces the moving image data of a predetermined amount from each of the plurality of predetermined reproduction start positions to write the moving image data of the predetermined amount in the memory, the controlling means further controlling the reproduction processing means so that in response to the reproduction start instruction by the reproduction instruction means, the reproduction processing means starts to read out, from among the moving image data

at the reproduction start position corresponding to the selected representative image". The closest prior art, Nakai (5,949,955) and Aotake et al. (5,687,160) disclose conventional reproducing apparatus, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
